

# Area accumulation functions and the FTC, graphical perspective

1. Example:

(a)  $F(x) = \int_0^x f(t) dt$ .  $F'(x) =$  \_\_\_\_\_

(b) Evaluate the following:

$F(0) =$

$F(2) =$

$F(5) =$

$F'(0) =$

$F'(2) =$

$F'(5) =$

$F''(0) =$

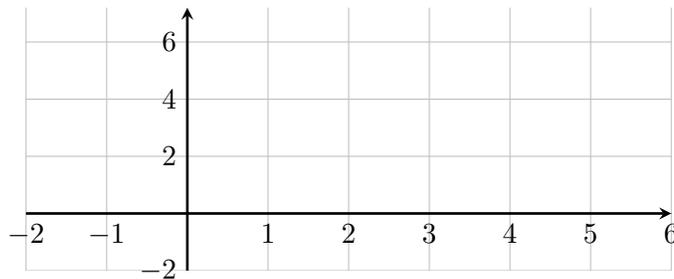

$F''(2) =$

$F''(5) =$

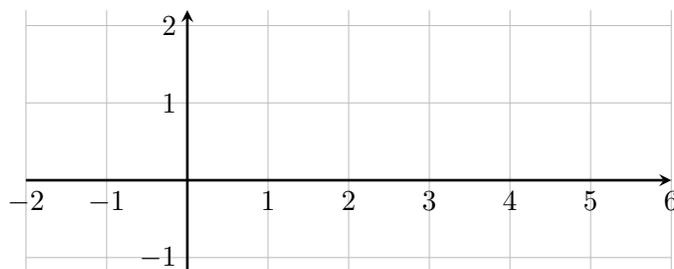

(c) Find a formula for  $F'(x)$  between  $x = 1$  and  $x = 2$ .

(d) Find a formula for  $F(x)$  between  $x = 1$  and  $x = 2$

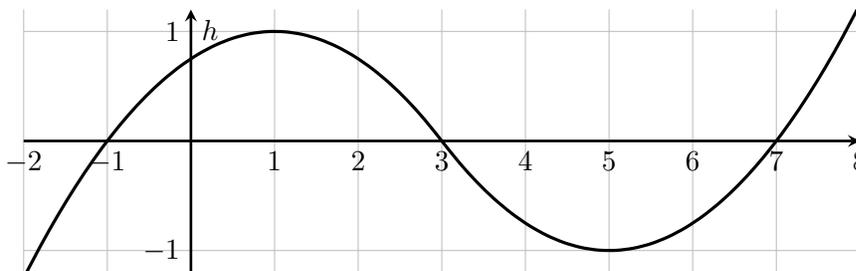

(e) Sketch  $F(x)$ .

(f) Sketch  $F'(x)$ .

2. Example:

(a)  $H_1(x) = \int_0^x h(t) dt$ .  $H_1'(x) =$  \_\_\_\_\_

At what  $x$  values does  $H_1(x)$  have:

critical points \_\_\_\_\_

local minima \_\_\_\_\_

local maxima \_\_\_\_\_

inflection pts \_\_\_\_\_

(b) Now  $H_2(x) = \int_{-1}^x h(t) dt$ .

At what  $x$  values does  $H_2(x)$  have:

critical points \_\_\_\_\_

local minima \_\_\_\_\_

local maxima \_\_\_\_\_

inflection pts \_\_\_\_\_

(c) What is the difference between  $H_1(x)$  and  $H_2(x)$ ?
