## 8.4: Ratio Test

Lecturer: Sarah Arpin

## Ratio Test

A test for **absolute convergence** or divergence.Recall the definition of **absolute convergence**: Give an example of a series which is:

$\sum a_n$  is absolutely convergent if the series  $\sum |a_n|$  converges. (when this happens,  $\sum a_n$  converges too)

1. Absolutely convergent:  $\sum_{n=1}^{\infty} \frac{1}{n^2}$  is abs. conv. by p-test with  $p=2 > 1$ .
2. Conditionally convergent:  $\sum_{n=1}^{\infty} \frac{(-1)^n}{n}$  converges by AST, but  $\sum_{n=1}^{\infty} \frac{1}{n}$  diverges (harmonic)
3. Divergent:  $\sum_{n=1}^{\infty} \frac{1}{n}$

**Theorem 84.1 (The Ratio Test)** Consider the series  $\sum_{n=1}^{\infty} a_n$ . Let

$$L = \lim_{n \rightarrow \infty} \left| \frac{a_{n+1}}{a_n} \right|$$

1. If  $L < 1$ , then the series  $\sum_{n=1}^{\infty} a_n$  is absolutely convergent.2. If  $L > 1$ , then the series  $\sum_{n=1}^{\infty} a_n$  is divergent.

3. If  $L = 1$ , then the Ratio Test fails to draw a conclusion about the series  $\sum_{n=1}^{\infty} a_n$ .  
 [use another test!]

How does the ratio test apply to a geometric series? Comparing a series to a geometric series is one way to prove the ratio test.

Don't use ratio test first:

$\sum_{n=1}^{\infty} n = 1+2+3+4+\dots$   
 diverges by div. test:  
 $\lim_{n \rightarrow \infty} n = \infty \neq 0$

Let's see what happens if we try to throw ratio test at this:

$$\lim_{n \rightarrow \infty} \left| \frac{a_{n+1}}{a_n} \right| = \lim_{n \rightarrow \infty} \left| \frac{n+1}{n} \right| = 1$$

inconclusive...

Example

$$n! = n \cdot (n-1) \cdot (n-2) \cdot \dots \cdot 3 \cdot 2 \cdot 1$$

Determine the convergence of the series:  $\sum_{n=1}^{\infty} \frac{n!}{100^n}$ Factorial  $\rightarrow$  Ratio Test?

$$\begin{aligned} L &= \lim_{n \rightarrow \infty} \left| \frac{a_{n+1}}{a_n} \right| = \lim_{n \rightarrow \infty} \left| \frac{(n+1)!}{100^{n+1}} \div \frac{n!}{100^n} \right| \\ &= \lim_{n \rightarrow \infty} \left| \frac{(n+1)! \cdot 100^n}{100^{n+1} \cdot n!} \right| \\ &= \lim_{n \rightarrow \infty} \left| \frac{(n+1) \cdot \cancel{n} \cdot \cancel{(n-1)} \cdot \dots \cdot \cancel{3} \cdot \cancel{2} \cdot 1}{100 \cdot \cancel{n} \cdot \cancel{(n-1)} \cdot \cancel{(n-2)} \cdot \dots \cdot \cancel{3} \cdot \cancel{2} \cdot 1} \right| \\ &= \lim_{n \rightarrow \infty} \frac{n+1}{100} = \infty > 1 \end{aligned}$$

By the Ratio Test,  $\sum_{n=1}^{\infty} \frac{n!}{100^n}$  diverges.

Example

Determine the convergence of the series:  $\sum_{n=1}^{\infty} \left[ \frac{5^{n+1}}{(-2)^{n+1}n} \right]$ 

- Alt. series test?

- Limit comparison test?

Try ratio test:  $L = \lim_{n \rightarrow \infty} \left| \frac{5^{n+1}}{(-2)^{n+1}(n+1)} \cdot \frac{(-2)^n n}{5^{n-1}} \right|$

$$= \lim_{n \rightarrow \infty} \left| \frac{5^n \cancel{(-2)^n} \cdot n}{(-2)^{n+1} (n+1) \cdot \cancel{5^{n-1}}} \right| = \lim_{n \rightarrow \infty} \left| \frac{5n}{-2(n+1)} \right|$$

$$= \lim_{n \rightarrow \infty} \frac{5n}{2n+2} = \frac{5}{2} > 1$$

Ratio Test  
Tells us the  
Series diverges.

## Example

Determine if the following series is absolutely convergent, conditionally convergent, or divergent.

$$\sum_{n=1}^{\infty} \frac{(-5)^n}{(n-1)!} \leftarrow a_n$$

Factorials  $\rightarrow$  Ratio Test

$$L = \lim_{n \rightarrow \infty} \left| \frac{a_{n+1}}{a_n} \right| = \lim_{n \rightarrow \infty} \left| \frac{(-5)^{n+1}}{(n+1-1)!} \cdot \frac{(n-1)!}{(-5)^n} \right|$$

$$= \lim_{n \rightarrow \infty} \left| \frac{(-5)^{n+1} \cdot (n-1)!}{n! \cdot (-5)^n} \right|$$

$$= \lim_{n \rightarrow \infty} \left| \frac{(-5)^{n+1} \cdot \cancel{(n-1)(n-2) \dots 3 \cdot 2 \cdot 1}}{n(n-1)\cancel{(n-2) \dots 3 \cdot 2 \cdot 1} \cdot (-5)^n} \right|$$

$$= \lim_{n \rightarrow \infty} \left| \frac{-5}{n} \right| = \lim_{n \rightarrow \infty} \frac{5}{n} = 0 < 1$$

absolutely  
converges  $\rightarrow$  ratio test

Factorials:

$$5! = 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1$$

$$n! = n \cdot (n-1) \cdot \dots \cdot 3 \cdot 2 \cdot 1$$

## Example

For which positive integers is the following series convergent?

$$\sum_{n=1}^{\infty} \frac{(n!)^k}{(kn)!}$$

start w/  $k=2$ :

$$\sum_{n=1}^{\infty} \frac{(n!)^2}{(2n)!} \quad \text{Ratio test: } L = \lim_{n \rightarrow \infty} \left| \frac{((n+1)!)^2}{(2(n+1))!} \cdot \frac{(2n)!}{(n!)^2} \right|$$

$$(n+1)! = (n+1) \cdot \cancel{n} \cdot \cancel{(n-1)} \dots \cancel{3} \cdot \cancel{2} \cdot 1$$

$$n! = \cancel{n} \cdot \cancel{(n-1)} \dots \cancel{3} \cdot \cancel{2} \cdot 1$$

$$= \lim_{n \rightarrow \infty} \left| \frac{(n+1)! \cdot (n+1)! \cdot (2n) \cdot (2n-1) \cdot (2n-2) \dots 3 \cdot 2 \cdot 1}{(2n+2)! \cdot (n+1) \cdot (n+1)} \right|$$

$$= \lim_{n \rightarrow \infty} \left| \frac{(n+1)(n+1) \cdot \cancel{(2n)} \cdot \cancel{(2n-1)} \cdot \cancel{(2n-2)} \dots \cancel{3} \cdot \cancel{2} \cdot 1}{(2n+2)(2n+1) \cdot \cancel{(2n)} \cdot \cancel{(2n-1)} \dots \cancel{3} \cdot \cancel{2} \cdot 1} \right|$$

$$= \lim_{n \rightarrow \infty} \frac{(n+1)(n+1)}{(2n+2)(2n+1)} = \lim_{n \rightarrow \infty} \frac{n^2 + 2n + 1}{4n^2 + 6n + 2} = \frac{1}{4} < 1$$

converges by Ratio Test
