## Reflection Questions:

1. Which details of a graph help you construct a polynomial?
2. Which details of a polynomial equation help you construct a graph?
3. Let's say you know that the end behavior of a polynomial is that both directions of $x$ send $f(x)$ to $\infty$. Is this enough to construct any given polynomial? Explain.
4. How do you identify the multiplicity of roots? When does it get confusing? What does the multiplicity tell us?
