

Seminar on Stacks and Groupoids

# Stacks for everyone

**Sebastian Casalaina-Martin**

University of Colorado at Boulder

This will be a continuation of the introduction to stacks. After reviewing some of the notions introduced last time, we will continue with some further examples. We will then give a (slightly) more precise definition of a stack. The presentation will be aimed at the level of second and third year graduate students. A more thorough discussion of the background will be given in later talks; this lecture will focus on giving a somewhat coarse overview.

Wednesday September 9th
