| 9 | 6 |  |
| 10 | 10 |  |
| Total: | 100 |  |

- No calculators or cell phones or other electronic devices allowed at any time.
- Show all your reasoning and work for full credit. Use full mathematical or English sentences.
- You have 90 minutes and the exam is 100 points.
- You do not need to simplify numerical expressions. For example leave fractions like $100 / 7$ or expressions like $\ln (3) / 2$ as is.
- When done, give your exam to your instructor, who will mark your name off on a photo roster.
- We hope you show us your best work!

1. (8 points) Match the following functions with their corresponding Maclaurin series:
(a) $e^{x^{2} / 2}=$ $\qquad$

$$
\text { I. } \sum_{n=0}^{\infty} x^{2 n}
$$

$$
\text { II. } \sum_{n=0}^{\infty} \frac{(-1)^{n} x^{2 n}}{2^{2 n}(2 n)!}
$$

(b) $\cos \left(\frac{x}{2}\right)=$ $\qquad$

$$
\text { III. } \sum_{n=1}^{\infty} n x^{n-1}
$$

(c) $\frac{1}{(1-x)^{2}}=$
IV. $\sum_{n=0}^{\infty} \frac{(-1)^{n} x^{2 n+2}}{2 n+1}$

$$
\text { V. } \sum_{n=0}^{\infty} \frac{(-1)^{n} x^{2 n+2}}{(2 n+1)!}
$$

(d) $x \arctan (x)=$ $\qquad$
VI. $\sum_{n=0}^{\infty} \frac{x^{2 n}}{2^{n} n!}$
2. (12 points) (a) Find the radius of convergence of the power series $\sum_{n=1}^{\infty} \frac{(x-5)^{n}}{2^{n} n^{2}}$. Show all work in justifying your answer.
(b) Find the interval of convergence. Show all work in justifying your answer.
3. (12 points) Find the solution of the differential equation

$$
y(x+1)+y^{\prime}=0
$$

that satisfies the initial condition $y(-2)=1$. Show all your work and write the solution on the line given below.

Solution: $y=$
4. (8 points) Given the following power series $\sum_{n=0}^{\infty} a_{n}(x-2)^{n}$ we know that at $x=0$ the series converges and at $x=8$ the series diverges. What do we know about the following values?
(a) At $x=3$ the series $\sum_{n=0}^{\infty} a_{n}(x-2)^{n}$ is:
(i) convergent
(ii) divergent
(iii) We cannot determine its convergence/divergence with the information given.
(b) At $x=-4$ the series $\sum_{n=0}^{\infty} a_{n}(x-2)^{n}$ is:
(i) convergent
(ii) divergent
(iii) We cannot determine its convergence/divergence with the information given.
(c) At $x=9$ the series $\sum_{n=0}^{\infty} a_{n}(x-2)^{n}$ is:
(i) convergent
(ii) divergent
(iii) We cannot determine its convergence/divergence with the information given.
(d) The following series $\sum_{n=0}^{\infty} a_{n}$ is:
(i) convergent
(ii) divergent
(iii) We cannot determine its convergence/divergence with the information given.
5. (12 points) (a) Write the definition for the $n^{\text {th }}$ degree Taylor polynomial of $f(x)$ centered at $x=a$.
(b) Find the second degree Taylor polynomial for $f(x)=\ln (\sec (x))$ centered at $\frac{\pi}{4}$.
6. (12 points) (a) Express the function $f(x)=\ln \left(1+x^{3}\right)$ as a power series centered about $x=0$.
(b) Express the definite integral as an infinite series.

$$
\int_{0}^{1} \ln \left(x^{3}+1\right) d x
$$

7. (12 points) (a) Fill in the boxes to complete the statement of Taylor's Inequality:
$\square$ $\leq M$ on the interval between the center, $a$, and the point of approximation, $x$, then the remainder, $R_{n}(x)$, of the $n^{\text {th }}$ degree Taylor polynomial, $T_{n}(x)$, satisfies the inequality:

$$
\left|R_{n}(x)\right| \leq \square
$$

(b) Use Taylor's Inequality to determine the number of terms of the Maclaurin series for $e^{x}$ that should be used to estimate the number $e$ with an error less than 0.6. Clearly justify your choice of $M$.
8. (8 points) Each of the following slope fields represents one of the following differential equations. Match each slope field to the corresponding differential equation.
(a) $\frac{d y}{d x}=\frac{x y}{2}$
(b) $\frac{d y}{d x}=y-x-2$
(c) $\frac{d y}{d x}=x+2$
(d) $\frac{d y}{d x}=e^{x^{2}}$
(I)

(II)

(III)

(IV)

9. (6 points) Find the sum of the series.

$$
\sum_{n=0}^{\infty} \frac{(-1)^{n}}{2 n+1}=1-\frac{1}{3}+\frac{1}{5}-\frac{1}{7}+\frac{1}{9}-\cdots
$$

10. (10 points) Assume we approximate the sum of the series

$$
\sum_{n=0}^{\infty} \frac{2}{n^{2}}
$$

by using the first 3 terms. Give an upper bound for the error involved in this approximation by using the Remainder Estimate for the Integral Test.
