## PRACTICE EXAM

|           |    |    |    |    |    |       |
|-----------|----|----|----|----|----|-------|
| Question: | 1  | 2  | 3  | 4  | 5  | Total |
| Points:   | 20 | 20 | 20 | 20 | 20 | 100   |
| Score:    |    |    |    |    |    |       |

- The exam is closed book. You **may not use any resources** whatsoever, other than paper, pencil, and pen, to complete this exam.
- You **may not discuss the exam** with anyone except me, in any way, under any circumstances.
- You **must explain your answers**, and you will be **graded on the clarity of your solutions**.
- You must upload your exam as a single **.pdf** to **Canvas**, with the questions in the correct order, etc.
- You have 45 minutes to complete the exam.

1. • Consider the following subset of real  $2 \times 2$  matrices:

$$H := \left\{ \begin{pmatrix} 1 & a \\ 0 & 1 \end{pmatrix} : a \in \mathbb{R} \right\} \subseteq M_2(\mathbb{R}).$$

- (a) (10 points) Show that matrix multiplication defines a binary operation on  $H$ .

- (b) (10 points) Does the map (or “*function*”)  $\phi : H \rightarrow \mathbb{R}$ , given by

$$\phi \left( \begin{pmatrix} 1 & a \\ 0 & 1 \end{pmatrix} \right) = a,$$

give an isomorphism of the binary structure  $\langle H, \cdot \rangle$  (here  $\cdot$  denotes matrix multiplication) with the binary structure  $\langle \mathbb{R}, + \rangle$ ? Explain.

| 20 points |
|-----------|

2. (20 points) • Suppose that  $\langle G, * \rangle$  is a binary structure such that:

1. The binary operation  $*$  is associative.
2. There exists a **left** identity element; i.e., there exists  $e \in G$  such that for all  $g \in G$ , we have  $e * g = g$ .
3. **Left** inverses exist; i.e., for all  $g \in G$ , there exists  $g^{-1} \in G$  such that  $g^{-1} * g = e$ .

Show that  $\langle G, * \rangle$  is a group.

| 20 points |

3. (20 points) • Let  $H$  be a subgroup of a group  $G$ . For  $a, b \in G$ , let  $a \sim b$  if and only if  $a^{-1}b \in H$ . Show that  $\sim$  is an equivalence relation on  $G$ .

| 3         |
| 10 points |

4. (a) (10 points) • In the group  $\mathbb{Z}_{28}$ , what is the order of the subgroup generated by the element 18?

(b) (10 points) How many generators are there for the group  $\mathbb{Z}_{28}$ ?

|           |
|-----------|
| 4         |
| 20 points |

5. • **TRUE** or **FALSE**. For this problem, and this problem only, **you do not need to justify your answer**.

(a) (4 points) **TRUE** or **FALSE** (circle one). Every subgroup of a cyclic group is cyclic.

(b) (4 points) **TRUE** or **FALSE** (circle one). If  $H$  and  $H'$  are subgroups of a group  $G$ , then  $H \cap H'$  is a subgroup of  $G$ .

(c) (4 points) **TRUE** or **FALSE** (circle one). If  $*$  is an associative binary operation on a set  $S$ , then for all  $a, b, c \in S$ , we have  $(a * b) * c = c * (a * b)$ .

(d) (4 points) **TRUE** or **FALSE** (circle one). Every finite group of at most 3 elements is abelian.

(e) (4 points) **TRUE** or **FALSE** (circle one). Every subgroup of an infinite group is infinite.
