Quiz 5

Name: _____

You have 10 minutes to complete this quiz. If you have a question raise your hand and remain seated. In order to receive full credit your answer must be **complete**, **legible** and **correct**. Show your work, and give adequate explanations.

1. Prove that addition is cancellative: for all m, n, k in ω we have

$$m + k = n + k \quad \text{implies} \quad m = n.$$

Let $P(x)$ be: " $\forall m \forall n ((m + k = n + k) \rightarrow (m = n))$ "

$P(0)$ holds: Assume that $m + 0 = n + 0$.

$$\begin{array}{ll} m + 0 &= n + 0 \\ m &= n \end{array} \quad \begin{array}{l} \text{Assumption} \\ \text{(IC, +)} \end{array}$$

$P(k) \rightarrow P(S(k))$ holds: Assume that $P(k)$ holds and that $m + S(k) = n + S(k)$.

$$\begin{array}{ll} m + S(k) &= n + S(k) & \text{Assumption} \\ S(m + k) &= S(n + k) & \text{(RR, +)} \\ m + k &= n + k & \text{Successor is injective} \\ m &= n & \text{Inductive hypothesis, } P(k) \end{array}$$

Hence $P(S(k))$ holds.
