Exercise 8.30

Abstract Algebra 1
MATH 3140

SEBASTIAN CASALAINA

ABSTRACT. This is Exercise 8.30 from Fraleigh [Fra03, §8]:

Exercise 8.30. Determine whether the function

$$f_1 : \mathbb{R} \to \mathbb{R}$$

defined by $f_1(x) = x + 1$ is a permutation of $\mathbb{R}$.

Solution. The function $f_1 : \mathbb{R} \to \mathbb{R}$ defined by $f_1(x) = x + 1$ is a permutation of $\mathbb{R}$; i.e., f_1 is both one-to-one and onto. We have seen that this is equivalent to showing that f_1 has an inverse function; i.e., a function $f_1^{-1} : \mathbb{R} \to \mathbb{R}$ such that for all $x \in \mathbb{R}$ we have $f_1^{-1}(f_1(x)) = x$ and $f_1(f_1^{-1}(x)) = x$.

I claim the inverse function f_1^{-1} is given by $f_1^{-1}(x) = x - 1$. To see this we have

$$(f_1^{-1} \circ f_1)(x) = f_1^{-1}(x + 1) = (x + 1) - 1 = x.$$

Similarly, we have

$$(f_1 \circ f_1^{-1})(x) = f_1(x - 1) = (x - 1) + 1 = x.$$
